Title

Payroll Management System

Abstract

The payroll management system is a comprehensive software solution designed to streamline and automate the payroll process within an organization in our windows forms application ,we will focus on the attendance and salaries functions, as they are very critical within any organization of all sizes. This project aims to develop a desktop application that would feature a user friendly interface allowing user (HR of the organization) to enter username And password, After login he will automatically be transferred to the next form then enable him to access all the information about salaries and days of absence of each employee. This application relies on excel file to store employee's details. The application is automating salary calculations based on employee's attendance. The implementation of this payroll management system is expected to deliver several benefits to the organization, including reduced administrative workload, improved employee satisfaction, and enhanced financial control.
